AIML-A**

- A timetable generator is a python program that automatically creates a weekly timetable.
- It helps organize subjects efficiently.
- It reduces manual work and saves time.

Introduction

Objectives

- Generate a weekly timetable automatically.
- Learn Python programming concepts.
- Use lists and loops efficiently.
- Improve coding skills.

Requirements

- Python 3.x
- Any IDE (VS Code, IDLE, PyCharm)
- Computer/Laptop
- Basic Python Knowledge

Algorithm

- Input the number of subjects.
- Store subjects in a list.
- Define working days and periods.
- Generate the timetable using loops.
- Display the timetable.

Python code

```
days = ["Monday", "Tuesday", "Wednesday", "Thursday", "Friday"]
periods = 6
subjects = []
n = int(input("Enter number of subjects: "))
for i in range(n):
    subject = input(f"Enter subject {i+1}: ")
    subjects.append(subject)
count = 0
for day in days:
    print(day)
    for period in range(1, periods + 1):
        print(f"Period {period}: {subjects[count % len(subjects)]}")
        count += 1
```

Start code here

from turtle import *

turtle = Turtle ()

turtle . forward (50)

turtle . right (90)

Code Explanation

1

List stores days and subjects.

2

User enters subject name.

3

Loops generate periods automatically

4

% operator repeats subjects when required.

Sample input

```
# Start code here
```

```
from turtle import *
```

```
turtle = Turtle ()
```

Enternumberofsubjects : 4
